Sequence 243, Application US/09881752A
Patent No. US20020115078A1
GENERAL INFORMATION:
APPLICANT: Kleanthous; Harold
APPLICANT: Al-Garawi, Amal
APPLICANT: Miller, Charles
APPLICANT: Oomen, Raymond P.
TITLE OF INVENTION: Identification of Polynucleotides
TITLE OF INVENTION: Encoding No. US20020115078A1el Helicobacter Polypeptides in 171TLE OF INVENTION: Genome
FILE REFERENCE: 06132/041002
CURRENT APPLICATION NUMBER: US/09/881,752A
CURRENT APPLICATION NUMBER: US/09/881,752A
CURRENT FILING DATE: 1997-04-01
NUMBER OF SEQ ID NOS: 370
SOFTWARE: FastSEQ for Windows Version 4.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII partial digest.
Seq primer: M13 For Class: BAC ends.

//clone lib="Ochrobactrum anthropi BAC Library"
//note="Vector: pBeloBAC11; Site 1: HindIII; Site 2:
HindIII; Ochrobactrum anthropi Is an important microbe
having potential for the bioremediation of environments
contaminated by aliphatic compounds. We have constructed
a BAC library for O. anthropi that provides a 90x genome
coverage based on an estimated genome size of 3.83 Mb.
The library contains 3072 clones with an average insert
size of 112 kbp. High-density colony filters of the
library were made and a physical map of the genome
constructed using a hybridization without replacement
strategy. In addition, 624 randomly chosen BAC clones
were HindIII fingerprinted and anylized using fingerprint
Contig (FPC; Sangre Centre, UK). The FPC results closely
supported and verified the hybridization contig data.
After deterimining a reduced tiling path of 69 clones,
138 BAC ends were sequenced for a genome wide survey of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        quality sequence stop:

/note="Vector: pSPORT1; Site_1: SalI; Site_2: NotI; Total
RNA was isolated from mycelium of p. infestans DDR7602
cultured for 4 weeks in synthetic medium. EST clones were
named by their position in the microtiter plate, preceded
by the prefix MY (for mycelial) and the successive number
of the microtiter plate (e.g. MY-06-A-04)."

RNA was isolated from mycelium of p. infestans DDR7602
cultured for 4 weeks in synthetic medium. EST clones were
named by their position in the microtiter plate, preceded
by the prefix MY (for mycelial) and the successive number
of the microtiter plate (e.g. MY-06-A-04)."

/note="Vector: pSPORT1; Site_1: SalI; Site_2: NotI; Total
RNA was isolated from mycelium of P. infestans DDR7602
cultured for 4 weeks in synthetic medium. EST clones were
named by their position in the microtiter plate, preceded
by the prefix MY (for mycelial) and the successive number
of the microtiter plate (e.g. MY-06-A-04)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /dev stage="4-week old vegetative, non-sporulating mycelium in synthetic medium"
